**AirCell® Transline & Radiating Cable with Fire Retardant Jacket (FX, F, FV, R)**

Invoice quantity is based on shipped footage.

Trilogy will fill customer orders with any combination of existing random lengths available. Thus, billed footage could vary up to +/- 10% of the total ordered quantity and +/- 20% per reel tolerance.

Tunnel applications: When the customer provides Trilogy with individual (sectional) tunnel lengths required for a project, Trilogy will provide the customer with custom match-up lengths equal (or within +10%) to the total required length for each section (multiple reels at various lengths). This additional service eliminates the need of cutting cable for each section at the project site and minimizes cable waste. Trilogy will provide this value added service without an additional charge to the customer.

However, the match-up program may have multiple reels at various lengths for each section. If the customer has minimum length per reel requirements, additional length premiums will be charged as following: 10% premium charge for over 1,000ft and 20% premium charge for over 2,000ft/reel.

**Exact Length Reel**

Trilogy will evaluate any exact length order on a case-by-case basis before accepting PO.
